

The background is a deep blue gradient. It is decorated with a complex pattern of thin, glowing blue lines that form various geometric shapes, primarily rectangles and squares, some of which are tilted. Scattered throughout the background are numerous small, bright blue dots, giving it a digital or starry appearance.

# Welcome to my presentation

Today I will be talking about  
Edge Computing

# What is Edge Computing?

Edge computing is about processing data closer to where it's generated, instead of relying entirely on centralized cloud servers.

# But how?

It actually works as a layer between client and cloud.

# Why does it matter?

- Faster response time
- Less internet dependency
- Better privacy
- Real-time decisions

The background is a deep blue gradient. It is filled with a complex pattern of thin, glowing blue lines that form various geometric shapes, primarily rectangles and squares, some of which are tilted. These lines are scattered across the entire frame, creating a sense of depth and movement. Interspersed among these lines are numerous small, bright blue dots, resembling stars or data points, which add to the futuristic and technological feel of the image.

# Future?

With the help of new technologies like 5G, edge computing will unlock new possibilities.
